Otisedol

Ear Drops

An anesthetic-, antibiotic- and anhydrous propylene glycol Compound

Formula per 10 ml

Phenol	200 mg
Tetracaine HCl	100 mg
Chloramphenicol	100 mg
Propylene glycol ad	10 ml

Otisedol is indicated in the treatment of acute inflammation of the middle ear (mastoiditis) and outer auditory meatus.

Otisedol should be applied lukewarm and only if it is assured that the tympanic membrane is intact.

Indications

Otisedol acts alleviative and bactericidal. The lukewarm solution should be dropped into the affected ear with patient's head inclined to the side, the affected ear pointing upwards. After a few minutes the ear should be closed up with a pad of cotton wool. Simultaneous treatment by warm moist compress or dry heat (raytreatment) should be made only according to physician's advise.

Use

Otisedol may be applied 3-4 times during the day.

Presentation

One bottle of 10 ml per box.

Storage

Store below 20 °C.

Keep out of reach of children.
