

EN REINFORCES THE INTESTINAL FLORA

Imutis is available in the form of capsules containing active micro-organisms who help to fortify and restore the intestinal flora in order to maintain its natural balance. **Imutis** has a protective influence in all circumstances (during travelling, stressful situations, ...).

PROBIOTICS

By the early twentieth century, the presence of numerous micro-organisms in the intestinal flora has been demonstrated. The intestinal flora of a healthy individual contains billions of bacteria that are essential to his health. These micro-organisms play an important role in the digestion process and help to reinforce the defense system at the level of the intestinal flora.

BACTERIA

The most abundant bacteria in our intestinal flora are the Lactobacilli and Bifidobacilli. They play an important role in food digestion and in the intestinal ecosystem.

YEASTS

Yeasts are frequently used in the food industry (bakery, wine production), but also in the production of probiotics. The yeast used in **Imutis** is *Saccharomyces boulardii*. It secretes enzymes that increase the organism's resistance and contribute towards digestion. For this reason, it has a favourable influence on the intestinal flora. As *Saccharomyces boulardii* is not present naturally in the intestinal flora, it is advisable to assure an external supply. Its presence in **Imutis** contributes to the favorable influence of this food supplement.

Imutis has the advantage to combine the complementary action of two protectors of the intestinal flora, yeasts and lactic bacteria.

Imutis presents an original and complete combination, specifically formulated to strengthen the intestinal flora and increase the resistance.

USE

1 to 4 **Imutis** capsules daily to be taken with a glass of water during meals. *Individuals who have difficulty swallowing (children or elderly persons), the content of the capsules may be dissolved in a glass of water or mixed with a small portion of food. Imutis should not be taken with alcohol, hot drinks or hot meals.*

Do not exceed the recommended daily intake. Does not substitute a varied and balanced diet nor a healthy lifestyle.

PRESENTATION

Packages containing 10, 20 or 50 capsules in blister pack.

INGREDIENTS

Each capsule of **Imutis** contains 6 billion cells of *Saccharomyces boulardii**, 2 billion cells of *Lactobacillus acidophilus**, 3 billion cells of *Lactobacillus rhamnosus** and 2 billion cells of *Bifidobacter longum**. Filling agents: maltodextrin, microcrystalline cellulose. Anticaking agents: magnesium stearate, magnesium silicate. Antioxidant: ascorbic acid. Capsule: hypromellose (E464), titanium dioxide (E171). * just after production

STORAGE

Keep out of reach of young children. For an optimal conservation it is recommended to store **Imutis** in the refrigerator, in the original package. Validity: see expiry date on the package.
