

Neurorubine®-Forte

For painful conditions of neurological and rheumatic origin

Lactab®

Composition

Each Lactab contains:

Vitamin B ₁	200 mg
Vitamin B ₆	50 mg
Vitamin B ₁₂	1000 mcg

Properties

Mode of action: *Neurorubine-Forte* combines in high dosage three important vitamins essential for the proper functioning of the nervous system. Each of these vitamins is indispensable to ensure the normal metabolic processes in nerve cells. Administered simultaneously and in pharmacodynamic high doses, the components exert their individual neurotropic effect but, in addition, the combination produces a potent analgesic action.

Indications

As an adjuvant in the treatment of:
Neuritic pain: acute or chronic neuritis and polyneuritis.
Neuralgia.

Toxic damage to nerve tissue: alcoholism, diabetic polyneuropathy, drug intoxication.

For the prophylaxis of vitamin B₆ deficiency during treatment with isoniazid, penicillamine, cycloserine, hydralazine.

Usual dosage

The dosage should be adapted to each individual case:
1-4 Lactab daily.

Severe cases: Treatment to be commenced with 4 Lactab daily until pain subsides.

Pregnancy, lactation

Neurorubine-Forte may be taken during pregnancy and lactation. Controlled studies in women have shown no risks to the foetus during the first trimester; there is no evidence suggesting a risk in the course of the remaining trimesters.

Contraindications

Owing to the vitamin B₁₂ content of the preparation, patients with psoriasis should not receive *Neurorubine-Forte Lactab*. Existing acne can be aggravated by *Neurorubine-Forte Lactab* due to the vitamin B₆ content.

Oral administration of vitamin B₁₂ is only possible if the gastrointestinal tract is functioning normally.

Hypersensitivity to vitamins B₁, B₆ or B₁₂.

Adverse effects, interactions

The effect of levodopa is diminished by vitamin B₆. Hypersensitivity reactions are rare and are observed mainly in the skin. Erythema, desquamation of facial skin, rash and acne can be attributable to one of the vitamins.
