

biocalcin

PROPERTIES

Biocalcin is a food supplement based on a combination of MenaQ7 and Vitamin D3. Biocalcin optimizes calcium binding to the bone structure, reducing the potential for development of osteoporosis but simultaneously reduces the calcification of arteries.

Several studies show that supplementing with calcium is not enough for optimal bone health. Adding vitamin D and vitamin K2 significantly improves bone health. Vitamin D stimulates the synthesis of osteocalcin, whereas Vitamin K2 is needed for the activation of osteocalcin. Only the Vitamin K2 activated osteocalcin will bind calcium optimally. In this way both vitamin D and Vitamin K2 work in synergy to enable efficient calcium use for improved bone health.

For heart biocalcin stimulates the MGP (matrix Gla protein) a physiological protein responsible for decreasing the risk of arterial calcification.

Simultaneously vitamin D helps in the formation of MGP as vitamin K2 in its activation.

PRESENTATION

Boxes of 30 capsules.

INGREDIENTS

1 capsule

Soy-bean oil, tunic: gelatin (bovine), humectants: glycerol, vitamin K2 (soybean oil, emulsifier: fatty acids), cholecalciferol (vitamine D) (antioxidant: DL-alpha-tocopherol, emulsifier: medium chain triglycerides)

USE

1 capsule daily.

Notification number: NUT/AS 1879/2 APB (L'Association Pharmaceutique Belge) CNK code: 3049020

FOOD SUPPLEMENT

Do not exceed the recommended daily intake.
