

Lipobase cream is an emollient cream which restores the physiological balance of the skin and making it soft and supple again.

Lipobase cream is an oil-in-water emulsion with a high percentage of lipids (70% oil and 30% water).

Its original formulation gives the cream:

- physiological properties:
 - hydrating and emollient: Lipobase cream enhances hydrating of the epidermis, reduces dryness and scaling and prevents the skin from harm.
 - Lipobase cream is well tolerated, contains no perfume and its composition is formulated so as to reduce the risk of allergy to a minimum.
 - Lipobase cream is not comedogenic and may be applied to the face.
- Cosmetic properties:
 - Lipobase cream is pleasant to use: easy to apply, may be washed off with water and does not stain your clothing.

How and when to use the preparation

Lipobase cream may be used as:

- an emollient cream for the care and protection of dry, sensitive and dehydrated skin; rub gently a thin layer of Lipobase cream into the skin surface which is to be treated.
- a supplement to the treatment of certain dermatological disorders; observe the dosage prescribed by your doctor.

Composition

White soft paraffin, cetostearyl alcohol, liquid paraffin, cetomacrogol 1000, citric acid, sodium citrate, methyl hydroxybenzoate and purified water.
