

Parodium

Gum care gel for sensitive gums

Parodium gum gel is an oral care product that promotes good oral hygiene and helps soothe sensitive gums that may show signs of minor local irritation.

Properties:

Thanks to its formula with rhubarb extract and chlorhexidine, **Parodium** promotes good oral hygiene and helps soothe sensitive gums that may show signs of minor local irritation. It helps to control the development of dental plaque and thus gives fresher breath. Its gel form means it adheres more easily to the gums during application.

Rheum palmatum:

Rhubarb root is a plant of Chinese origin that has been known and used since 2000 B.C. Its rhizome which contains glucosides and tanning agents endows it with numerous properties. Some of these compounds have a beneficial effect on gums.

Directions for use:

Apply a pea-sized amount of **Parodium** gel onto a clean finger and massage directly onto the sensitive areas, up to 3 times per day, as well as brushing. Do not swallow. Suitable for age 12+. This does not substitute brushing teeth after every meal.
