

Elugel

Oral gel

Contributing to oral-dental hygiene

Helps reduce dental plaque

Purifying

ELUGEL helps to keep a healthy oral-dental routine by effectively reducing dental plaque formation.

The specially formulated gel has a targeted action and an optimised contact time.

ELUGEL contains 0.2% chlorhexidine digluconate, known for its purifying properties.

ELUGEL has been odontologically and paediatrically tested and its efficacy has been clinically proven. ELUGEL reduces the development of dental plaque, soothes gums and makes them less sensitive.

When should ELUGEL be used?

ELUGEL can be used in the following oral-dental hygiene cases:

- When local conditions prevent thorough brushing; as a complement to dental cares or in cases of sensitive gums.
- In people who are unable to brush their teeth.

How to use ELUGEL?

Apply ELUGEL on the affected area using your finger or a very soft brush. Repeat three times daily. Do not use on children under the age of 6 years.

Do not swallow.

Do not store above 25 °C.

Remarks:

This is not an alternative to brushing teeth after each meal. Prolonged usage of this product may sometimes stain teeth; this will disappear by brushing.
