05/06/2018 SeniorProbio

SeniorProbio capsules by HealthAid

For every cell in our body there are about ten bacterial cells. The microflora in our gut plays an active role in a wide variety of diseases, and, it could affect our health status throughout life. People over 60 can have as much as 1,000-fold less friendly bacteria in their guts compared to younger adults, and increased levels of disease-causing microbes. For this reason, the importance of probiotic supplementation is crucial with advancing age. Recent research also shows that microorganisms present in our gut can affect how well we age, as well as our mental and immune function. Studies have demonstrated that consumption of the probiotic strainBifidobacterium Lactis could lead to increased disease-fighting capacity of white immune cells, thereby boosting the immune system in aging seniors.

Healthaid SeniorProbio is a unique formulation specially formulated for seniors. It contains a superior blend of 30 billion viable probiotic cultures made up of 12 special strains, each having its own properties; it is also fortified with a prebiotic (FOS), to maintain a healthy intestinal flora which usually declines with age. HealthAid® uses special acid & bile resistant strains, which prevent the stomach juices destroying the ingredients before they reach the intestines, ensuring their purity and potency.

What are SeniorProbio capsules for?
