

Vidane Syrup

Expectorant & Bronchodilator

Composition:

Each 5 ml contains:

Thyme fluid extract 30.0 mg

(Thymol 0.5%)

Anise oil 0.1 mg

White pine extract 12.5 mg

(Pranthocyanidine 60-95%)

Clover honey 50.0 mg

Properties:

Vidane combines effective natural components that relieve and prevent cough and promote secretions from the bronchial tubes, lungs and trachea. Thyme is an antispasmodic, especially for the small airway tubules in paroxysmal coughs such as whooping cough.

Together with white pine & anise oil they are tonic volatile antiseptics which help to stimulate, repair & diminish fluid secretions due to inflammation and through their mild irritant effects act directly on the bronchi and help to increase sputum expulsion by stimulating normal respiratory fluid secretions.

Vidane also incorporates the rich clover honey which is known to have a delightful aroma and is commonly used to alleviate coughs.

Precaution:

In case of pregnancy, please consult your physician.

Side effects:

No side effects are worthy of note while adhering to the prescribed dosage.

Dosage:

Adults : One tablespoonful three times daily.

Children : Half to one teaspoonful three times daily.

Storage:

Store between 15- 30°C, keep tightly closed

Pack:

Bottle of 120 ml.
