

URINEX

Soft Gelatin Capsules
(Enteric coated)

FOR
RENAL and URINARY DISORDERS
and UROLITHIASIS

Composition :

Each capsule contains :

Pinene ($\alpha + \beta$)	31 mg
Camphene	15 mg
Borneol	10 mg
Fenchone	4 mg
Anethole	4 mg
Cineole	3 mg

Properties :

Urinex is a well-tolerated combination of pure natural ingredients that provide marked subjective improvement in painful renal disorders and urinary stones. Urinex is eliminated from the body in the urine as glucuronides which stabilize urinary colloids, increase calcium salt solubility and help breakdown urinary stones. Urinex also increases renal blood flow resulting in increased urine excretion which helps flush stones from urinary passages. The hyperemic effect on renal mucus membranes reduces the pain associated with inflammation. In addition, the antispasmodic effect of Urinex via its action on urinary smooth muscles facilitates the elimination of stones and reduces the spasm which causes renal and ureteric colic.

Indications :

- Renal and urinary disorders.
- Painful spasms and inflammation of the urinary tract associated with urolithiasis.
- For the dissolution and expulsion of urinary tract stones.

Dosage :

One capsule to be taken 3-4 times daily half an hour before meals, or as directed by the physician.

Package :

Box containing 24 enteric coated soft gelatin capsules.

Storage :

Keep in a dry place away from heat.
Keep out of the reach of children.
