

LUMIFUREX

Nifuroxazide

Intestinal, anti-infective agent

PRESENTATION

Lumifurex 200 : Capsules, box of 28.

Nifuroxazide: 200 mg per capsule.

PROPERTIES

Intestinal anti-infective with a sufficiently broad spectrum for a initial therapy in intestinal infectious disorders. Its antibacterial properties affect in particular gram positive cocci (Staphylococci and streptococci) and gram negative germs (Escherichiacoli, Salmonella, Shigella and Klebsiella). There is a natural resistance to proteus, providentia, pseudomonas. The activity of Lumifurex is independent of the sensitivity or resistance to antibiotics and it does not cause a selection of antibiotic resistance strains. Lumifurex respects the saprophytic flora. The strictly local effect is a guarantee of excellent tolerance. Nifuroxazide remains with the intestinal lumen and has no systemic effect.

PHARMACOKINETICS

Nifuroxazide is insoluble in water. If mucosa is not damaged, there is almost no intestinal absorption. Nifuroxazide is not found in urine and plasma after usual method of dosage.

INDICATIONS

Acute diarrhea presumed to be of bacterial origin if no invasive phenomena are suspected. **This treatment does not dispense with rehydration if necessary.**

CONTRAINDICATION

Any previous allergic reaction to nitrofurane derivatives. Premature and New born infants 0 to 1 month.

DOSAGE AND ADMINISTRATION

Lumifurex 200: in adults : usually 1 capsule 4 times a day
