

MYCICORT®

Anti - infection Anti - inflammatory

MYCICORT is a combination of an anti-inflammatory, Hydrocortisone, and an antibiotic, Neomycin.

PROPERTIES.

- Hydrocortisone is a corticosteroid particularly active and well tolerated, having fast sedative property in the inflammatory and allergic manifestations.
- Neomycin, is a broad spectrum antibiotic, used locally, without sensibilisation in general. It adds to the corticotherapy obtained with Hydrocortisone, an anti-infectious property, which is needed when microbial factor interfere.

COMPOSITION.
