

# Ocean Spray

**Salt solution for cleaning and moistening the mucous membrane of the nose;  
also suitable for babies and infants!**

## **Composition:**

Isotonic salt solution with the most important minerals.

## **Particular Features:**

With this nose spray we are dealing with a medical product without preserving materials or propellant. Nevertheless, it functions in all positions, i.e. it can also be used over the head.

## **Areas of Application:**

Ocean spray creates a fine spray mist and serves the moistening and cleaning of the mucous membrane of the nose. This counteracts any drying out of the nose. The nose loses its natural moistness due to particular influences of the environment. Amongst these are dry heating air, smoke, dust, high-pressure weather conditions and air conditioning in the office or car. The nose dries out and the sensation experienced by most people as being unpleasant, the "dry nose", arises. But also the natural cleaning function of the mucous membrane of the nose is unfavorably influenced by the lack of moistness. In such cases Ocean Spray helps in moistening the mucous membrane of the nose again: the sensation of the "dry nose" disappears, breathing through the nose is alleviated and cleaning improved. This is the case particularly for babies and infants who cannot protect themselves.

Application of Ocean Spray several times daily can be recommended both for adults and for children of any age without any concern. For colds also the use of Ocean Spray represents a meaningful and useful additional measure for the moistening of the mucous membrane of the nose and for the improvement of the cleaning function.

## **Instructions for Use:**

Remove the protective cap. Take the spray bottle into the hand as shown in the sketch and press the spray mechanism several times until a fine mist is emitted. The system is now ready for use for any further application.

Insert the spray opening into one nostril and pump it once breathing in lightly at the same time. Depending on requirement, spray once or twice into each nostril several times a day for adults and children (from 2 years) and once into each nostril for babies and infants (under 2 years). Application for an infant in a lying position is also possible without problem.

Please wipe off the nose adapter after **each application** and close it with the protective cap.

**Instructions for storage:**

As far as possible Ocean Spray should not be stored at over 25° C.

**Information concerning storage durability:**

The nose spray should not be used for longer than 6 weeks after first use. After the date of expiry (see collapsible box and label), the product should no longer be used.

**Size of packing and form of product:**

15 ml solution (controlled dosage spray)

**Manufacturer:**

EUSAN
