

GOCCE® di PRUGNA

Dietary supplement

based on vegetable extracts, Prune juice and inulin

COMPOSITION:

- Vegetable extracts of Senna, Cascara, Chicory, Aloe.
- Inulin
- Prune, powdered fruit, natural extract of Tamarind, natural extract of Liquorice

SENA, CASCARA, PRUNE, TAMARIND, LIQUORICE and INULIN:

Senna and Cascara vegetable extracts, exerting a synergic action, help guarantee a more rapid outflow of excrement in the small intestine, improving the evacuation of faeces. The principle components of senna are glycosides whose aglycones belong to the group of anthracene derivatives. Administered orally, the anthraquinonic glycoside passes unaltered through the stomach and small intestine, whilst in the large intestine, the sugar is removed and the remainder is metabolized by the intestinal flora into rhein-anthrone, a metabolite with laxative action. The products obtained are in fact poorly absorbed and stimulate motility in the colon and secretion. Cascara active principles work on colon, stimulating contraction and assisting evacuation. Inulin is substantially a soluble fibre, for the most part indigested in the small intestine. Its properties include the ability to facilitate digestion and reduce intestinal gas; in fact it increases the density of bifidobacteria and reduces that of harmful bacteria. Prune juice helps lubricate the faecal mass, facilitating its passage along the intestinal tube, moistening and thereby softening the material. Aloe increases the intestinal peristalsis and water content in the intestine. Its clinical effect is characterised by more frequent evacuations of faeces of soft consistency. Prune juice and tamarind contribute to the lubrication of the faecal mass facilitating its passage along the intestine, moistening and thereby softening the material. Liquorice also has an anti-inflammatory effect, reduces processes irritating the mucosa, guaranteeing a more efficient digestive process.

PRODUCTS IN THIS RANGE

INDICATIONS: Sporadic stipsis, light stipsis, chronic stipsis are the conditions for which **GOCCE di PRUGNA** is recommended, containing all the elements necessary for the physiological functioning of passage along the intestine.

PACKAGING: The product is packaged in a 25 ml bottle + drop dispenser sealed in bag.

INSTRUCTION FOR USE: The recommended dosage is 30-50 drops diluted in a glass of water. In case of chronic stipsis, the recommended dosage is 50 drops diluted in a glass of water. Products containing anthraquinones should not be taken for more than 10 consecutive days. It should be remembered that in order to help restore the physiological conditions in the intestinal apparatus, abundant quantities of fluid should be consumed (natural water) between meals, preferably in the evening before going to bed.

Shake before use.

Keep in a fresh dry place, protected from direct light and heat.

WARNINGS: Keep out of the reach of children under the age of three. Do not exceed the recommended daily dosage. Do not take during pregnancy. Dietary supplements should not be considered as a substitute for a balanced diet.

Products containing anthraquinones should not be taken for more than 10 consecutive days.

PERLE[®] diPRUGNA

Dietary supplement
based on vegetable extracts, with prune juice

COMPOSITION

- Vegetable extracts of Cassia, Frangula, Aloe, Rhubarb, Cinnamon, Verbena and Clove
- Propolis
- Prune, powdered fruit

The vegetable extracts, exerting a synergic action, help guarantee a more rapid outflow of excrement in the small intestine, improving the evacuation of faeces.

Prune juice helps lubricate the faecal mass, facilitating its passage along the intestinal tube, moistening and thereby softening the material.

Propolis thanks to its anti-inflammatory action, reduces irritation of the mucous membranes, ensuring that the digestive process functions more efficiently.

INDICATIONS

Sporadic stipsis, light stipsis, chronic stipsis are the conditions for which PERLE di PRUGNA are recommended, containing all the elements necessary for the physiological functioning of passage along the intestine.

PACK: 75 Pearls in blister pack

INSTRUCTION FOR USE

The recommended dosage is 2 or 3 pearls per day, in the evening when required, accompanied by a glass of water.

It should be remembered that in order to help restore the physiological conditions in the intestinal apparatus, abundant quantities of fluid should be consumed (natural water) between meals, preferably in the evening before going to bed.

Keep in a fresh dry place, protected from direct light and heat.

WARNINGS

Keep out of the reach of children under the age of three. Do not administer to women during pregnancy. Do not exceed the recommended daily dosage. Dietary supplements are not intended to replace a varied diet.
