

1. HAEMATINIC AGENTS

1.2. IRON DEFICIENCY ANAEMIA

FEROMAX

Presentation

Ampoules: Pack of 5 ampoules of 5mL solution.

Composition

Each ampoule contains: 100mg elemental iron (Fe+++)
as iron sucrose complex.

Indications

Treatment of iron deficiency anaemia in the following cases:

Where there is a clinical need to deliver iron rapidly.

In patients who cannot tolerate oral iron therapy.

In active inflammatory bowel disease.

Dosage and Administration

For intravenous use only. This may be by a slow intravenous injection or by an intravenous drip infusion.

Adults and elderly: Total single dose must not exceed 200mg of iron given not more than three times per week.

Children: Not recommended.
