

Bifril[®] Plus 30mg /12.5 mg film-coated tablets

(Zofenopril Calcium / Hydrochlorothiazide)

Read all of this leaflet carefully before you start taking this medicine

- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor or pharmacist.
- This medicine has been prescribed for you. Do not pass it on to others. It may harm them, even if their symptoms are the same as yours.
- If any of the side effects gets serious, or if you notice any side effects not listed in this leaflet, please tell your doctor.

In this leaflet:

1. What Bifril Plus is and what it is used for
2. Before you take Bifril Plus
3. How to take Bifril Plus
4. Possible side effects
5. How to store Bifril Plus
6. Further information

1. WHAT BIFRIL PLUS IS AND WHAT IT IS USED FOR

Bifril Plus contains zofenopril calcium and hydrochlorothiazide as the active ingredients.

- Zofenopril calcium is a cardiovascular drug which belongs to a group of blood pressure lowering medicines called angiotensin converting enzyme (ACE) inhibitors.
- Hydrochlorothiazide is a diuretic, that acts by increasing the amount of urine you produce.

Bifril Plus is used to treat mild to moderate high blood pressure (hypertension), when this is not adequately controlled by taking zofenopril alone.

2. BEFORE YOU TAKE BIFRIL PLUS

DO NOT take Bifril Plus if you:

- are allergic (hypersensitive) to zofenopril or to hydrochlorothiazide or to any of the ingredients in the product (see Section 6 'What Bifril Plus contains' and end of Section 2 'Important information about some of the ingredients of Bifril Plus')
- are allergic (hypersensitive) to other sulphonamide-derived substances (like hydrochlorothiazide, which is a sulphonamide-derived drug)
- have had any previous allergic reaction to any other ACE inhibitor such as captopril or enalapril
- have a history of severe swelling and itching around the face, nose and throat (angioneurotic oedema) associated with previous ACE inhibitor therapy, or if you suffer from hereditary/idiopathic angioneurotic oedema (rapid swelling of the skin, tissues, digestive tract and other organs)
- suffer from severe liver or kidney problems
- suffer from narrowing of the arteries to the kidneys
- are more than 3 months pregnant (It is also better to avoid Bifril Plus in early pregnancy - see "pregnancy section").

Take special care with Bifril Plus

Please consult your doctor before taking Bifril Plus if you:

- have **liver** or **kidney problems**
- have high blood pressure that is caused by a kidney problem or by narrowing of the artery leading to the kidney (renovascular hypertension)
- have recently had a **kidney transplant**
- are undergoing **dialysis**
- are on **LDL apheresis** (a procedure similar to kidney dialysis that clears your blood of harmful cholesterol)
- have **abnormally high levels** of the hormone **aldosterone** in your blood (primary aldosteronism)
- have a **narrowing of the heart valve** (aortic stenosis) or **thickening of the heart walls** (hypertrophic cardiomyopathy)
- suffer or have suffered from **psoriasis** (skin disease characterised by scaly pink patches)
- are receiving **desensitization** treatment ('allergy injections') for insect stings
- have **lupus erythematosus** (a disorder of the immune system, your body's defence system)
- if you tend to have **low blood potassium**, and especially if you suffer from prolonged QT syndrome (a kind of ECG abnormality) or you are taking digitalis (to help your heart pump)
- have **diabetes**
- if you have angina or disorders affecting the brain, since low blood pressure can lead to a heart attack or stroke.

The hydrochlorothiazide in Bifril Plus may cause your skin to be oversensitive to sunlight or artificial UV light. Stop taking Bifril Plus and tell your doctor if you get a rash, itchy spots or sensitive skin during treatment (see also Section 4).

Anti-dope test: **Bifril Plus could cause a positive anti-dope test.**

- Your **blood pressure may get too low** with Bifril Plus, especially after the first dose (this is more likely if you have also been taking diuretics, are dehydrated or a low-salt diet, or if you have sickness or diarrhea). If this happens, tell your doctor **immediately** and then lie down on your back (see also Section 4).

If you are having an **operation**, **tell your anaesthetist** that you are taking Bifril Plus before being anaesthetised. This will help him/her to control your blood pressure and heart rate during the procedure.

You must tell your doctor if you think you are (or might become) pregnant. Bifril Plus is not recommended in early pregnancy, and must not be taken if you are more than 3 months pregnant, as it may cause serious harm to your baby if used at that stage (see pregnancy section)

BIFRIL PLUS is not recommended for use in children and adolescents.

Taking other medicines

Please tell your doctor if you are taking or have recently taken any other medicines, including medicines obtained without a prescription.

In particular, tell your doctor if you are taking:

- medicines that increase blood potassium levels (e.g. trimethoprim, potassium supplements, potassium-sparing diuretics such as spironolactone, triamterene, amiloride), , potassium-containing salt substitutes
- other medicines that affect the levels of blood chemicals (AdrenoCorticoTropic Hormone - ACTH - used to stimulate the production of some hormones by the body, amphotericin B injections, carbenoxolone, stimulant laxatives)
- lithium (used to treat mood disorders)
- anaesthetics
- narcotic drugs (such as morphine)
- antipsychotic drugs (used to treat schizophrenia and similar illnesses)
- antidepressants of the tricyclic type, e.g. amitriptyline and clomipramine
- other high blood pressure medicines and vasodilators (including, beta-blockers alpha-blockers and diuretics, such as hydrochlorothiazide, furosemide, torasemide)
- nitroglycerine and other nitrates used for chest pain (angina)
- antacids including cimetidine (used to treat heartburn and stomach ulcers)
- cyclosporin (used after organ transplants) and other immunosuppressant drugs (medicines that suppress your body's immune defences)
- medicines for gout (e.g. probenecid, sulfinpyrazone and allopurinol)
- insulin or oral anti-diabetic medicines
- cytostatic agents (used to treat cancer or diseases which affect the body's immune defences)
- corticosteroids (powerful anti-inflammatory drugs)
- procainamide (used to control an irregular heart beat)
- nonsteroidal anti-inflammatory drugs (NSAIDs, such as aspirin or ibuprofen)
- sympathomimetic drugs (medicines that act on the nervous system, including some used to treat asthma or hay fever and pressor amines, e.g. adrenalin)
- calcium salts
- digitalis (used to help the heart pump)
- cholestyramine and colestipol resins (used to lower cholesterol)
- medicines used to relax muscles (e.g. tubocurarine)
- amantadine (an antiviral medicine).

Taking Bifril Plus with food and drink

Bifril Plus can be taken with food or on an empty stomach, but always with some water.

To ease swallowing, you may break the tablet in two and swallow one half right after the other.

Alcohol increases the hypotensive (lowering of blood pressure) effect of Bifril Plus; ask your doctor for further advice on drinking alcohol whilst on this medication.

Pregnancy and breast-feeding

Pregnancy

You must tell your doctor if you think you are (or might become) pregnant. Your doctor will normally advise you to stop taking Bifril Plus before you become pregnant or as soon as you know you are pregnant and will advise you to take another medicine instead of Bifril Plus.

Bifril Plus is not recommended in early pregnancy, and must not be taken when more than 3 months pregnant, as it may cause serious harm to your baby if used after the third month of pregnancy.

Breastfeeding

Tell your doctor if you are breast-feeding or about to start breast-feeding. Bifril Plus is not recommended for mothers who are breast-feeding, and your doctor may choose another treatment for you if you wish to breast-feed, especially if your baby is newborn, or was born prematurely.

Driving or operating machines

This medicine may cause dizziness or tiredness. If this happens to you, do not drive or operate machinery.

Important information about some of the ingredients of Bifril Plus

This product contains **lactose** - if you know you have an intolerance to some sugars, contact your doctor before taking this medicine.

3. HOW TO TAKE BIFRIL PLUS

Always take Bifril Plus exactly as your doctor has told you. You should check with your doctor if you are not sure.

The usual dose of Bifril Plus is one tablet per day.

Bifril Plus may be taken with food or on an empty stomach. The tablet is best taken with some water.

This medicine is not recommended for use in children and adolescents.

If you are over 65 and suffer from an impaired kidney function, Bifril Plus may not be suitable for you (see also Section 2 – 'Take Special Care with Bifril Plus')

If you take more Bifril Plus than you should

If you accidentally take too many tablets, contact your doctor or nearest hospital immediately (taking any remaining tablets, the carton or this leaflet with you if possible).

The most frequent symptoms and signs of an overdose are low blood pressure with fainting (hypotension), very slow heart beat (bradycardia), changes in blood chemicals (electrolytes), kidney dysfunction, excessive urination with consequent dehydration, nausea and somnolence, muscle spasms, heart rhythm disturbances (especially if you are also taking digitalis or medicines for heart rhythm problems).

If you forget to take Bifril Plus

If you miss a dose, take the next dose as soon as you remember. However if your next dose is nearly due, skip the forgotten dose and take the next scheduled normal dose at the usual time. Do not take a double dose to make up for the one forgotten.

If you stop taking Bifril Plus

Always consult your doctor before stopping Bifril Plus treatment.

If you have any further questions on the use of this product, ask your doctor or pharmacist.

4. POSSIBLE SIDE EFFECTS

Like all medicines, Bifril Plus can cause side effects, although not everybody gets them.

The following side effects have been reported in clinical trials with Bifril Plus:

Common side effects (affecting less than 1 person in every 10 treated):

- dizziness
- headache
- cough.

Less common side effects (affecting less than 1 person in every 100 treated):

- infection
- bronchitis
- sore throat
- increase in blood cholesterol and/or other lipids, increased blood glucose, potassium, uric acid, creatinine and liver enzymes
- decrease in blood potassium
- insomnia
- somnolence, fainting, muscle tightness (hypertonia)
- angina, heart attack, atrial fibrillation, palpitations
- flushing, low blood pressure, high blood pressure
- nausea, indigestion, gastritis, inflammation of the gums, dry mouth, stomach pain
- rapid-onset swelling, especially of the lips, cheeks, eyelids, tongue, palate, voice box (larynx), with possible sudden difficulty breathing (angioneurotic edema). If you have any of these, it means that you have a serious allergy for Bifril Plus. You may require urgent medical intervention, or you may need to be hospitalized
- skin disease characterised by scaly pink patches (psoriasis), acne, dry skin, itching, hives
- back pain
- increased urine (polyuria)
- general weakness (asthenia), flu like symptoms, peripheral swelling (usually around the ankles)
- impotence

The following side effects were not reported in clinical trials with Bifril Plus, but they have been reported with **zofenopril calcium and/or other ACE inhibitors**, so they may also occur with the use of Bifril Plus:

- Tiredness (fatigue). Severe low blood pressure at the start of treatment or when the dosage is increased, with dizziness, impaired vision, fainting; low blood pressure on standing.
- Chest pain, muscle aches and/or cramps.
- Impaired consciousness, sudden dizziness, suddenly impaired vision or weakness and/or loss of sense of touch on one side of the body (transient ischaemic attack or stroke).
- Reduced kidney function, changes in the amount of daily urine, presence of proteins in the urine (proteinuria).
- Vomiting, diarrhoea, constipation.
- Allergic skin reaction with peeling, redness, loosening and blistering of the skin (toxic epidermal necrolysis), worsening of psoriasis, hair loss (alopecia).
- Increased sweating.
- Mood changes, depression, sleep disorders.
- Altered skin sensations such as burning, prickling, or tingling (paraesthesia).
- Disorders of balance, confusion, ringing in the ears (tinnitus), taste disturbances, blurred vision.
- Difficulty in breathing, narrowing of the airways in the lung (bronchospasm), sinusitis, runny or stuffy nose (rhinitis), inflammation of the tongue (glossitis).
- Yellowing of the skin (jaundice), inflammation of the liver or pancreas (hepatitis, pancreatitis), bowel obstruction (ileus).
- Changes in blood tests, such as red blood cell, white blood cell or platelet count or a reduction in all kinds of blood cells (pancytopenia): Contact your doctor if you find that you bruise easily or develop an unexplained sore throat or fever.
- Increased blood levels of bilirubin, increased blood urea.
- Anaemia due to rupture of red blood cells (haemolytic anaemia), which may occur if you suffer from G6PD (glucose-6-phosphate dehydrogenase) deficiency.

The following side effects were not reported in clinical trials with Bifril Plus, but they have been reported with **hydrochlorothiazide**, so they may also occur with the use of Bifril Plus:

- Impaired production of new blood cells by the bone marrow (bone marrow failure).
- Fever, whole-body allergic reaction (anaphylactic reaction).
- Altered levels of body fluids (dehydration) and blood chemicals (electrolytes), gout, diabetes, metabolic alkalosis.
- Apathy, nervousness, restlessness.
- Convulsions, depressed level of consciousness, coma, paresis.
- Yellow vision (xanthopsia), worsening of myopia, decreased lacrimation.
- Vertigo (spinning sensation).
- Heart rhythm disturbances (arrhythmias), changes in the electrocardiogram.
- Formation of blood clots in veins (thrombosis) and embolism, circulatory collapse (shock).
- Respiratory distress, lung inflammation (pneumonitis), formation of fibrous tissue in the lungs (interstitial lung disease), fluid accumulation in the lung (pulmonary oedema).
- Thirst, lack of appetite (anorexia), absence of bowel movements (ileus paralytic), excessive gas in the stomach, inflammation of the glands that produce saliva (sialoadenitis), increased blood amylase (a pancreatic enzyme, hyperamylasaemia), inflammation of the gall bladder (cholecystitis).
- Purple spots/blotches on the skin (purpura), increased sensitivity of your skin to sunlight, rash (especially facial) and/or patchy redness that can cause scarring (cutaneous lupus erythematosus), inflammation of blood vessels with consequent death of tissue (vasculitis necrotising).
- Acute kidney failure (with reduced urine production and build-up of fluid and wastes in your body), inflammation of the connective tissue within the kidneys (interstitial nephritis), sugar in the urine.

If any of the side effects gets serious, or if you notice any side effects not listed in this leaflet, please tell your doctor or pharmacist.

5. HOW TO STORE BIFRIL PLUS

Keep out of the reach and sight of children.

Do not store above 30°C

Do not take Bifril Plus after the expiry date ('EXP') which is stated on the box and blister pack.

Always keep the tablets in their original packaging.

Medicines should not be disposed of via wastewater or household waste. Ask your pharmacist how to dispose of medicines no longer required. These measures will help to protect the environment.

6 . FURTHER INFORMATION

What Bifril Plus contains

The **active substances** are zofenopril calcium 30mg and hydrochlorothiazide 12.5 mg.

The **other ingredients** are the following:

- **Tablet Core:** Microcrystalline cellulose, lactose monohydrate, maize starch, hypromellose, silica colloidal anhydrous, magnesium stearate
- **Film Coat:** Opadry Pink 02B24436 (hypromellose, titanium dioxide (E 171), macrogol 400, iron oxide red (E 172), macrogol 6000

(see end of Section 2 'Important information about some of the ingredients of Bifril Plus').

What Bifril Plus looks like and contents of the pack

Bifril Plus 30mg/12.5mg tablets are pastel-red, round, slightly bi-convex film-coated tablets with a break-mark on one side. The tablets are available in packs of 28 tablets.
