

## Omeprazole sodium

Composition
Each vial contains:

Each vial contains:

\*\*Active ingredient: Lyophilized (freeze-dried) oms 
sodium equivalent to omeprazole 40 mg.

\*\*Excipients: Disodium edetate and sodium hydro 

\*\*Properties\*\*

Ucazal represents the current trend in the tree r VUPETIES

Ulcazal represents the current trend in the treatment of peptic ulcer and allied conditions whereby the final step of gastric acid secretion is inhibited irrespective of the stimulus. Ulcazal acts specifically by inhibiting the H7/K-ATPase enzyme system (the proton pump) at the secretory surface of the gastric parietal cells, blocking thereby the final transport of hydrogen ions into the gastric lumen, and thus inhibiting effectively both basal and stimulated acid secretion.

Ulcazal has also antimicrobial activity against Helicobacter pylori by selective inhibition of H. pylori urease, which is necessary for gastric colonization.

Ulcazal has no effect on acetylcholine or histamine receptors.

necessary for gastric colonization. Ulcazal has no effect on acetylcholine or histamine receptors. After intravenous administration, omeprazole distributes rapidly to extravascular sites. The volume of distribution of omeprazole may be slightly decreased in elderly and in patients with hepatic insufficiency but it is not marketly affected in patients with renal impairment. The elimination half-lifle of omeprazole from plasma is short, being reported to be about 10-3-3 h, however, its duration of action with regard to inhibition of acid secretion is much longer allowing it to be used in single daily doses. Omeprazole is pinjly bound (about 95%) to plasma protein. It is almost completely metabolized in the liver, primarily by the cytochrome P450 system. Almost 80% of an intravenously given dose is excreted as metabolites in the urine and the remainder is found in the faeces, primarily originating from bile secretion.

### Indications

dication dications: Acid aspira general and Peptic ulce Gastro-eso

ndications:
Acid aspiration: prophylaxis of acid
general anesthesia (through gastric aci
Peptic ulcer: benign gastric and ulcer.
Gastro-esophageal reflux disease.
Zollinger-Ellison syndrome: managem
gastric hypersecretion associated with
syndrome (including cases resistant to igement of pathologic with Zollinger-Ellison int to other treatments).

gastric nyu—
syndrome (including co...)

Dosage
Gastric acid reduction during general are (prophylaxis of acid aspiration): 40 mg to be compour before surgery.

Benign gastric ideer, duodenal uber, and gastroer reflux: 40 mg once daily until oral administration possible.

Zollinger-Ellison syndrome: 60 mg once daily, tigher daily doses may be required and the doses dipusted individually.

The doses exceed 60 mg daily, the dose some of the daily.

The discontinuous control of the daily.

The daily control of the daily control of the daily control of the daily.

The daily control of the daily control of the daily control of the daily.

After fecurisitium, in immediately, intrusion: The entire contents of each vial is to be dissolved in approximately 5 ml and then immediately diluted to 100 ml. Physiological Sodium chloride (0.9%) solution for infusion or glucose (5%) solution for infusion must be used. The reconstituted solution of Ulcazal should be given as an intravenous infusion over a period of 20-3 00 minutes. After reconstitution, the solution should be administered.

or ago:
Impaired hepatic functions: As omeprazole is extensively metabolized in the liver, its plasma half-life is increased in patients having hepatic impairment; caution is recommended in such patients and the recommended daily does should not exceed 20 mg. Impaired renal functions: Dosage adjustment is not needed in patients with impaired renal functions.

Geriatrics: Dosage adjustment is not needed in geriatric variations.

Pediatrics: As the omeprazole in precommended in characteristics.

### THIS IS A MEDICAMENT

 Medicament is a product which affects your health, and its consumption contrary to instructions is dangerous for you.
 Follow strictly the doctor's prescription, the method of use and the instructions of the pharmacist who sold the medicament.
 The doctor and the pharmacist are experts in medicines,

their benefits and risks.

•Do not by yourself interrupt the period of treatment prescribed for you.

Do not repeat the same prescription without consulting

your doctor.
• Keep all medicaments out of the reach of children.
