Package leaflet: Information for the user

Genvoya®

150 mg/150 mg/200 mg/10 mg film-coated tablets

Elvitegravir/cobicistat/emtricitabine/tenofovir alafenamide

Read all of this leaflet carefully before you start taking this medicine because it contains important information for you.

Keep this leaflet. You may need to read it again.

If you have any further questions, ask your doctor or pharmacist.

This medicine has been prescribed for you only. Do not pass it on to others. It may harm them, even if their signs of illness are the same as yours.

If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. See section 4.

What is in this leaflet

- 1. What Genvoya is and what it is used for
- 2. What you need to know before you take Genvoya
- 3. How to take Genvoya
- 4. Possible side effects
- 5. How to store Genvoya
- 6. Contents of the pack and other information

What Genvoya is and what it is used for

Genvoya contains four active substances:

- elvitegravir, an antiretroviral medicine known as an integrase inhibitor
- **cobicistat,** a booster (pharmacokinetic enhancer) of the effects of elvitegravir
- emtricitabine, an antiretroviral medicine known as a nucleoside reverse transcriptase inhibitor (NRTI)
- tenofovir alafenamide, an antiretroviral medicine known as a nucleotide reverse transcriptase inhibitor (NtRTI)

Genvoya is a single tablet for the **treatment of human immunodeficiency virus 1 (HIV-1) infection** in adults and adolescents 12 years of age and older, who weigh at least 35 kg.

Genvoya reduces the amount of HIV in your body. This will improve your immune system and reduce the risk of developing illnesses linked to HIV infection.

2. What you need to know before you take Genvoya

Do not take Genvoya:

- If you are allergic to elvitegravir, cobicistat, emtricitabine, tenofovir alafenamide or any of the other ingredients of this medicine (listed in section 6 of this leaflet).
- If you are taking one of these medicines:
- **alfuzosin** (used to treat an enlarged prostate gland)
- amiodarone, quinidine (used to correct irregular heartbeats)carbamazepine, phenobarbital, phenytoin (used to prevent
- seizures)

 rifampicin (used to prevent and treat tuberculosis and other
- infections)

 dihydroergotamine, ergometrine, ergotamine (used to treat
- migraine headache)

 cisapride (used to relieve certain stomach problems)
- **St. John's wort** (*Hypericum perforatum*, a herbal remedy used for depression and anxiety) or products that contain it
- **I lovastatin, simvastatin** (used to lower blood cholesterol)
- **pimozide** (used to treat abnormal thoughts or feelings)
- sildenafil (when used to treat pulmonary arterial hypertension a lung disease that makes breathing difficult)
- orally administered midazolam, triazolam (used to help you sleep and/or relieve anxiety)
- If any of these applies to you, do not take Genvoya and tell your doctor immediately.

Warnings and precautions

You must remain under the care of your doctor while taking Genvoya.

You can still pass on HIV when taking this medicine, although the risk is lowered by effective antiretroviral therapy. Discuss with your doctor the precautions needed to avoid infecting other people. This medicine is not a cure for HIV infection. While taking Genvoya you may still develop infections or other illnesses associated with HIV infection.

Talk to your doctor before taking Genvoya:

■ If you have liver problems or a history of liver disease, including hepatitis. Patients with liver disease including chronic hepatitis B or C, who are treated with antiretrovirals, have a higher risk of severe and potentially fatal liver complications. If you have hepatitis B infection, your doctor will carefully consider the best treatment regimen for you.

If you have hepatitis B infection, liver problems may become worse after you stop taking Genvoya. It is important not to stop taking Genvoya without talking to your doctor: see section 3, *Do not stop taking Genvoya*.

- If you have diabetes, are overweight or have high cholesterol.

 Combination antiretroviral medicines, including Genvoya, may raise blood sugar levels and increase blood fats. Your doctor will carefully consider the need to monitor these levels.
- If you are intolerant to lactose (see Genvoya contains lactose later in this section).

While you are taking Genvoya

Once you start taking Genvoya, look out for:

- Signs of inflammation or infection
- Joint pain, stiffness or bone problems
- If you notice any of these symptoms, tell your doctor immediately. For more information see section 4, Possible side effects.

Children and adolescents

Do not give this medicine to children aged 11 years or under, or weighing less than 35 kg. The use of Genvoya in children aged 11 years or under has not yet been studied.

Other medicines and Genvoya

Tell your doctor or pharmacist if you are taking, have recently taken or might take any other medicines. Genvoya may interact with other medicines. As a result, the amounts of Genvoya or other medicines in your blood may be affected. This may stop your medicines from working properly, or may make any side effects worse. In some cases, your doctor may need to adjust your dose or check your blood levels.

Medicines that must never be taken with Genvoya:

- **alfuzosin** (used to treat an enlarged prostate gland)
- **amiodarone, quinidine** (used to correct irregular heartbeats)
- carbamazepine, phenobarbital, phenytoin (used to prevent seizures)
- rifampicin (used to prevent and treat tuberculosis and other infections)
- dihydroergotamine, ergometrine, ergotamine (used to treat migraine headache)
- **cisapride** (used to relieve certain stomach problems)
- St. John's wort (Hypericum perforatum, a herbal remedy used for
- depression and anxiety) or products that contain it
- **pimozide** (used to treat abnormal thoughts or feelings)
- sildenafil (when used to treat pulmonary arterial hypertension –
- a lung disease that makes breathing difficult)

 orally administered midazolam, triazolam (used to help you sleep and/or relieve anxiety)
- If you are taking any of these medicines, do not take Genvoya and tell your doctor immediately.

Medicines used in treating hepatitis B infection:

You should not take Genvoya with medicines containing:

- tenofovir disoproxil fumarate
- lamivudine
- adefovir dipivoxil
- Tell your doctor if you are taking any of these medicines.

Other types of medicine:

Talk to your doctor if you are taking:

- antifungals, used to treat fungal infections, such as:
- ketoconazole, itraconazole, voriconazole, posaconazole and fluconazole
- antibiotics, used to treat bacterial infections including tuberculosis, containing:
- rifabutin, clarithromycin and telithromycin
- antiviral medicines used to treat hepatitis C:
- telaprevir and boceprevir
- antidepressants, used to treat depression:
 medicines containing trazodone or escitalopram
- sedatives and hypnotics, used to treat anxiety:
- buspirone, clorazepate, diazepam, estazolam, flurazepam, zolpidem and lorazepam
- immunosuppressants, used to control your body's immune response after a transplant, such as:
- ciclosporin, sirolimus and tacrolimus
- inhaled steroids, used to treat hay fever (allergic rhinitis):
 fluticasone
- medicines used to treat diabetes:
- metformin
- **contraceptive pill,** used to prevent pregnancy
- erectile dysfunction medicines, used to treat impotence, such as:
 sildenafil, tadalafil and vardenafil
- heart medicines, such as:
- digoxin, disopyramide, flecainide, lidocaine, mexiletine, propafenone, metoprolol, timolol, amlodipine, diltiazem, felodipine, nicardipine, nifedipine and verapamil
- medicines used to treat pulmonary arterial hypertension:
 bosentan and tadalafil
- anticoagulants, used to thin the blood, such as:warfarin and dabigatran
- bronchodilators, used to treat asthma and other lung-related
- salmeterol
- cholesterol lowering medicines, such as:
- atorvastatin and pitavastatin
- medicines used to treat gout:

How to take Genvova)

- → Tell your doctor if you are taking these or any other medicines. Do not stop your treatment without contacting your
- antacids, used to treat heartburn or acid reflux (see also section 3,
- ➡ If you are taking an antacid or a multivitamin supplement, take it at least 4 hours before or at least 4 hours after Genvoya.

Pregnancy and breast-feeding

- If you are pregnant or breast-feeding, think you may be pregnant or are planning to have a baby, ask your doctor for advice before taking this medicine.
- Use effective contraception while taking Genvoya.

Ask your doctor or pharmacist for advice before taking any medicine when pregnant.

Do not breast-feed during treatment with Genvoya. This is because some of the active substances in this medicine pass into human breast milk. It is recommended that you do not breast-feed to avoid passing the virus to the baby in breast milk.

Driving and using machines

Genvoya can cause dizziness. If you feel dizzy when taking Genvoya, do not drive and do not use any tools or machines.

Genvoya contains lactose

Tell your doctor if you are lactose intolerant or intolerant to other sugars. Genvoya contains lactose monohydrate. If you are lactose-intolerant, or if you have been told that you have an intolerance to other sugars, talk to your doctor before taking this

⇒ If any of these applies to you, talk to your doctor before taking Genyova.

How to take Genvoya

Always take this medicine exactly as your doctor has told you. Check with your doctor or pharmacist if you are not sure.

The recommended dose is:

Adults: one tablet each day with food

Adolescents 12 years of age and older, who weigh at least 35 kg: one tablet each day with food

Do not chew, crush or split the tablet.

Always take the dose recommended by your doctor. This is to make sure that your medicine is fully effective, and to reduce the risk of developing resistance to the treatment. Do not change the dose unless your doctor tells you to.

Do not take antacids or multivitamins at the same time as Genvoya. If you are taking an antacid such as aluminium/magnesium hydroxide or a **multivitamin supplement**, take it at least 4 hours before or at least 4 hours after Genvoya.

If you take more Genvoya than you should

If you accidentally take more than the recommended dose of Genvoya you may be at increased risk of experiencing possible side effects with this medicine (see section 4, *Possible side effects*).

Contact your doctor or nearest emergency department immediately for advice. Keep the tablet bottle with you so that you can easily describe what you have taken.

If you forget to take Genvoya

It is important not to miss a dose of Genvoya.

If you do miss a dose:

- If you notice within 18 hours of the time you usually take Genvoya, you must take the tablet as soon as possible. Always take the tablet with food. Then take the next dose as usual.
- If you notice 18 hours or more after the time you usually take Genvoya, then do not take the missed dose. Wait and take the next dose, with food, at your usual time.

If you vomit less than 1 hour after taking Genvoya, take another

Do not stop taking Genvoya

Do not stop taking Genvoya without talking to your doctor. Stopping Genvoya can seriously affect your response to future treatment. If Genvoya is stopped for any reason, speak to your doctor before you restart taking Genvoya tablets.

When your supply of Genvoya starts to run low, get more from your doctor or pharmacist. This is very important because the amount of virus may start to increase if the medicine is stopped for even a short time. The disease may then become harder to treat.

If you have both HIV infection and hepatitis B, it is especially important not to stop your Genvoya treatment without talking to your doctor first. You may require blood tests for several months after stopping treatment. In some patients with advanced liver disease or cirrhosis, stopping treatment is not recommended as this may lead to worsening of your hepatitis, which may be life-threatening.

→ **Tell your doctor immediately** about new or unusual symptoms after you stop treatment, particularly symptoms you associate with hepatitis B infection.

If you have any further questions on the use of this medicine, ask your doctor or pharmacist.

4. Possible side effects

Like all medicines, this medicine can cause side effects, although not everybody gets them. When treating HIV infection, it is not always possible to tell whether some of the unwanted effects are caused by Genvoya or by other medicines that you are taking at the same time, or by the HIV disease itself.

Possible serious side effects: tell a doctor immediately

- Any signs of inflammation or infection. In some patients with advanced HIV infection (AIDS) and a history of opportunistic infections (infections that occur in people with a weak immune system), signs and symptoms of inflammation from previous infections may occur soon after anti-HIV treatment is started. It is thought that these symptoms are due to an improvement in the body's immune response, enabling the body to fight infections that may have been present with no obvious symptoms.
- Autoimmune disorders, when the immune system attacks healthy body tissue, may also occur after you start taking medicines for HIV infection. Autoimmune disorders may occur many months after the start of treatment. Look out for any symptoms of infection or other symptoms such as:
- muscle weakness
- weakness beginning in the hands and feet and moving up towards the trunk of the body
- palpitations, tremor or hyperactivity.
- ➡ If you notice the side effects described above, tell your doctor immediately.

Very common side effects

(may affect more than 1 in 10 people)

■ feeling sick (nausea)

Common side effects

(may affect up to 1 in 10 people)

- abnormal dreams
- headache
- dizziness
- diarrhoea
- vomiting
- stomach pain
- wind (*flatulence*)
- rash
- tiredness (fatique)

Uncommon side effects

(may affect up to 1 in 100 people)

- low red blood cell count (anaemia)
- depression
- problems with digestion resulting in discomfort after meals (*dyspepsia*)
- swelling of the face, lips, tongue or throat (angioedema)
- itching (pruritus)
- ➡ If any of the side effects get serious tell your doctor.

Other effects that may be seen during HIV treatment

The frequency of the following side effects is not known (frequency cannot be estimated from the available data).

- **Bone problems.** Some patients taking combination antiretroviral medicines such as Genvoya may develop a bone disease called *osteonecrosis* (death of bone tissue caused by loss of blood supply to the bone). Taking this type of medicine for a long time, taking corticosteroids, drinking alcohol, having a very weak immune system, and being overweight, may be some of the many risk factors for developing this disease. Signs of osteonecrosis are:
- joint aches and pains (especially of the hip, knee and shoulder)difficulty with movement
- ➡ If you notice any of these symptoms tell your doctor.

Reporting of side effects

If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the national reporting system.

By reporting side effects you can help provide more information on the safety of this medicine.

5. How to store Genvoya

Keep this medicine out of the sight and reach of children.

Do not use this medicine after the expiry date which is stated on the carton and bottle after {EXP}. The expiry date refers to the last day of that month

Store below 30°C.

Do not throw away any medicines via wastewater or household waste. Ask your pharmacist how to throw away medicines you no longer use. These measures will help protect the environment.

6. Contents of the pack and other information

What Genvoya contains

The active substances are elvitegravir, cobicistat, emtricitabine and tenofovir alafenamide. Each Genvoya film-coated tablet contains 150 mg of elvitegravir, 150 mg of cobicistat, 200 mg of emtricitabine and tenofovir alafenamide fumarate equivalent to 10 mg of tenofovir alafenamide.

The other ingredients are

Tablet core:

Lactose (as monohydrate), microcrystalline cellulose, croscarmellose sodium, hydroxypropyl cellulose, silicon dioxide, sodium lauryl sulfate, magnesium stearate.

Film-coating:

Polyvinyl alcohol (E1203), titanium dioxide (E171), polyethylene glycol (E1521), talc (E553b), indigo carmine aluminium lake (E132), iron oxide vellow (E172).

What Genvoya looks like and contents of the pack

Genvoya film-coated tablets are green, capsule-shaped tablets, debossed on one side with "GSI" and the number "510" on the other side of the tablet. Genvoya comes in bottles of 30 tablets (with a silica gel desiccant that must be kept in the bottle to help protect your tablets). The silica gel desiccant is contained in a separate sachet or canister and should not be swallowed.

The following pack size is available: outer cartons containing 1 bottle of 30 film-coated tablets.
